Job Description

Our client has been a manufacturer of Articulated Trucks, currently producing a 6-model range used in many industries including mining, construction and aggregates. Due to continued growth they are seeking an experienced **NPI Coordinator** to join the team in **Peterborough on contracting basis**

The successful applicant will be joining the group at an exciting time, as the team fully integrates **Small Engines** into IPSD having ended the joint venture. This sees IPSD take **full design, component sourcing and engine manufacturing responsibility**, in addition to managing a new portfolio of customer accounts.

As a key **New Source Introduction (NSI) resource**, the successful applicant for this role will be focused on supporting the transfer of engine production out of the one facility into the IPSD, Griffin and Peterborough facilities. This will require working with the cross functional team on pilot engine readiness (**bill of materials BOM, part set-up, material availability, facility readiness**), supporting engine builds, addressing process gaps, capturing issues and then driving them to resolution in preparation for production.

There will be significant internal process partner collaboration and engagement with customer facing teams to maintain alignment and identify and mitigate risk.
